How does it connect to the dealer app?

The dealer app shows the service providers available nearby and the distance based on the site. If the dealer's site is known, nearby service providers can be easily compared.

Regular partners can be used in the calculator. The dealer can select the most suitable one from the registered partners. If there is no selected regular or registered partner, the previous default transport options remain available.

After preparing the calculation, the dealer can switch to another registered service provider and then recalculate the amount. The contact details of the service provider can appear on the calculation sheet and in the e-mail.

When the dealer selects a service provider, the service provider side receives a notification. This way you can see if a dealer has chosen you or calculated with your services.

Availability on the dealer side

When selecting a service provider, the dealer sees your weekly opening hours and the next bookable time slots. Therefore, it is worth keeping your availability up to date on the Opening hours and Calendar page.

Register of vehicle orders (dealer side)

On the app.carvinsight.eu page, the dealer can track the service provider orders related to their stock vehicles in a register: status, cost, appointment and comment. This complements your Orders list on the dealer's side, as the two views serve the same orders with a different task.
