Credibility counters on the public pages

The counters visible on the public pages of carvinsight.eu are updated from CarVinsight's own, continuously expanding information. They are not made-up marketing numbers: as the scope of information expands, they grow.

What the cards show

- European vehicle supply: the number of searchable European listings.
- Hungarian market time series: how many days back we can see market data.
- Vehicle information: the earliest production year for which we have data.
- Type sheets: the number of available type sheets and equipment data.

The text above the counters: "Where decision support starts: European supply, Hungarian time series, vehicle data, expanding type sheets."
