Vehicle data sheet and operations

Selected vehicle data sheet

- Image gallery (zoom / lightbox)
- Technical data and equipment (displayed in Hungarian where applicable)
- Market sample summary (how many similar vehicles, price range)
- Estimated distance from your own site
- **Realistic vehicle value** and the interpretation of the difference between the foreign listing price and the Hungarian market value

Operations for the selected vehicle

1. Preparing / running the **Delivery and cost calculator**
2. **Temporary saving** to the Saved vehicles list
3. **Contacting the seller directly** (revealing contact details)
4. **Requesting CarVinsight's assistance** (interest in delivery / representation)

Sales chance for the vehicle (2026-10-20)

On the vehicle data sheet, a sales chance card shows how fast a sale can be expected on the Hungarian market. The valuation is prepared using our own method based on market data, and it also provides a short, understandable explanation. The card always indicates: **Recommendation, not mandatory.**

Recall warning (11 November 2026)

If a vehicle type may be affected by a manufacturer recall, CarVinsight warns you. The warning is available to every logged-in dealer, without any special settings, in three places:

- **Search:** a badge in the search results shows ("Recall: the vehicle may be affected"), and a detailed warning appears on the data sheet of the selected vehicle, with the explanation of the CV agent.
- **Valuation:** a warning card appears below the result, with the explanation of the CV agent.
- **Stock:** a warning bar appears below the row of the affected car, with the explanation of the CV agent.

What does the warning mean? Based on the brand, model and year of manufacture, the given type may be affected. This does not mean that the specific car has been recalled. Check the specific vehicle by VIN. If the repair has been carried out, it can be seen from the service history. The warning is not an official check by VIN.

The explanation of the CV agent. On the search data sheet, at the valuation result and in the stock, the CV agent briefly explains what the recall is about. The explanation is based exclusively on official recall data and European car news stored in CarVinsight's own database. If the stored text is in another language, the CV agent quotes it in the original language, with an indication.

Language. The warning appears in the language selected on the interface: Hungarian, German, English, Dutch, Italian or French.

If there is no stored match, no warning appears.

Loading the data sheet (2026-10-28)

The data sheet of the selected vehicle opens immediately with the data and photos known from the search. The full listing description loads in the background, this can take between 10 and 30 seconds, leaning towards the longer end for popular models or detailed listings. The data sheet indicates if the description is still arriving, and also if the description is not available from the listing page. You can find the detailed times on the Filtering and search results page.

Support: Telegram and Viber, every day of the week between 0 and 24 hours.
