Vehicle identification from a photo and valuation entry points

Quick start in CarVinsight

Photo-based vehicle identification

Upload a vehicle photo, and CarVinsight will provide a recommendation for the brand, model, year and color. The recommendation is only a starting point: always confirm the recognized data before the search or the valuation.

If the number plate is visible, we reuse the previous identification for an already known vehicle.

Starting a valuation: three ways

- **Photo:** after checking the identification, the valuation can be started from here.
- **Vehicle registration certificate:** upload it or take a photo of it, check the data, and then start the valuation.
- **Classic, manual:** enter the brand, model, year and other known characteristics manually.

For all three entry points, you approve the vehicle data: the photo identification is not an automatic decision.

Free text search

The free text, natural language search is available on the Search screen, not only as part of the valuation. Simply describe what kind of vehicle or condition you are looking for, and then refine it at the results and with the filters. The photo search button pre-fills the brand, model and year fields

after checking the recommendation.

Availability

For dealers: app.carvinsight.eu (Search). For service providers: partners.carvinsight.eu (separate book).

Collapsible left menu

After logging in or the initial setup, the left menu can be collapsed, leaving more space for the search and the valuation.

Availability (2026-11-09)

Vehicle identification (model recognition and year verification) is available to all dealers. In uncertain cases, the system asks for confirmation before the search or the valuation continues.
