B4. What can the service provider edit?

Editable fields and service items.

- Editable fields
- Service items

Editable fields

In Settings, you can manage the service provider details and the site.

- After verification, the company name and tax number are displayed, but as locked fields. Modifying the tax number requires a new verification.
- The site is mandatory: it cannot be left empty, and it can be the same as the registered office or different from it. Based on the site, we calculate the distance to the dealers and show nearby partners.
- Upon your first login, you must fill in the site before starting any other work.
- The description, contact details and prices for the services are also editable. The company data recorded through verification cannot be overwritten directly.

Service items

The service item includes the category, the service name, the price and the currency (HUF or EUR).

- The categories are: transport, service, cosmetics, technical and other.
- For transport, two types of prices can be entered: a price per kilometre (HUF/km or EUR/km), or a fixed fee for a route between Hungary and an EU member state. Specify the chosen pricing and the route clearly.
- When saving a new item, empty or invalid rows are omitted.
- The approved service provider prices appear on the dealer interface.
