How CarVinsight works, a human-friendly explanation

CarVinsight is not a "desktop program" but an online service. You do not need to install anything for the web interface: it can be used from a browser from anywhere. On Android, two of our applications are also available in the Play Store, CarVinsight for dealers and PriceOfMyAuto (Autóérték in Hungary) for private individuals. Overview: Services and apps.

Concept	What it means in practice
Always available	You do not need to install or maintain anything, the service can be used from a browser. On Android, also from an application.
Remains fast	It remains usable even with multiple simultaneous users and higher traffic, and you do not need to do anything for this. For popular models or detailed data sheets, a few seconds of patience may be required.
Secure login and payment	Protected login, secure card payment. Bank transfer can also be chosen (monthly or annual fee).
Your data is safe	The company, the car stock, the valuations and the settings are stored securely, linked to the user.
Automatic updates	For example, the nightly revaluation of the stock and the notifications run even when you are not working in the system.
Method based on market data	The values, chances and recommendations are created using a method based on market data. Every recommendation is advisory in nature: "Recommendation, not mandatory".
Knowledge base	wiki.carvinsight.eu is the home of the user guides.

The dealer and the service provider use the same service, but with separate roles and on separate interfaces.

Live status (2026-11-15)

- All features for every dealer: search initiated from a sentence, interpretation of the result, sample search, Hungarian market analysis window, stock alert.
- Higher contrast free text search field and interfaces.

- Sales chance per car, with an understandable explanation. Always: "Recommendation, not mandatory". Nightly update at 04:05 (Budapest time) for all active dealers.
- Factory recall warning for everyone, with bulk stock checking and badges. A match of brand, model and year means that the car might be affected, the exact car must be checked based on the VIN.
- Results grouped and sorted by listing portal.
- Hungarian market data for September 2026: average price 5 460 000 Ft, 124 550 listings.
- Import calculator: the registration tax, the technical inspection fee and the official fees are calculated according to the current legislation, the calculation can be downloaded in PDF format under Saved vehicles.
- Unified brand and model list, Hungarian equipment names, seat number filtering.
- PriceOfMyAuto (for private individuals): one time, 1 490 Ft valuation in PDF, with a price range, email typo monitoring, resending the receipt to a corrected address, protection of the dealer stock based on the VIN.
- Public import calculator and national guides on the website.
- CarVinsight application for Android (for dealers): search, valuation and trade-in, saved cars, stock management, dealer registration with a 14-day trial. Available in the Play Store.
- PriceOfMyAuto application for Android (for private individuals), version 1.1.0: paid valuation, the PDF opens even without the internet and can be shared as an attachment, garage (one car for free, every further car is 1 EUR per month), new valuation after 30 days with the push of a button, checking recalls, listing text. Available in the Play Store.
